

Educational objectives for the Computer Science program:

1. Preparing graduates capable of analyzing and solving complex computing problems based on the theoretical and scientific foundations of computer science.
2. Enabling graduates to design, implement, and evaluate reliable and efficient software solutions that meet labor market requirements.
3. Developing effective communication skills, professional responsibility, and ethical conduct among graduates in alignment with legal and societal standards.
4. Preparing graduates to work effectively within multidisciplinary teams and contribute efficiently to the completion of computing projects.
