

Educational objectives for the Artificial Intelligence program:

1. Preparing graduates with a strong foundational knowledge in artificial intelligence and data science, enabling them to analyze data and make data-driven decisions.
2. Enabling graduates to design and develop innovative artificial intelligence solutions that meet the needs of various sectors and keep pace with technological advancements.
3. Preparing graduates to compete in the local, regional, and international job markets in the fields of artificial intelligence and data science.
4. Developing leadership skills, innovation mindset, and continuous learning abilities among graduates to enhance their professional and technical excellence.
